

Drone detection and Drone defense

Counter-Drone Solutions

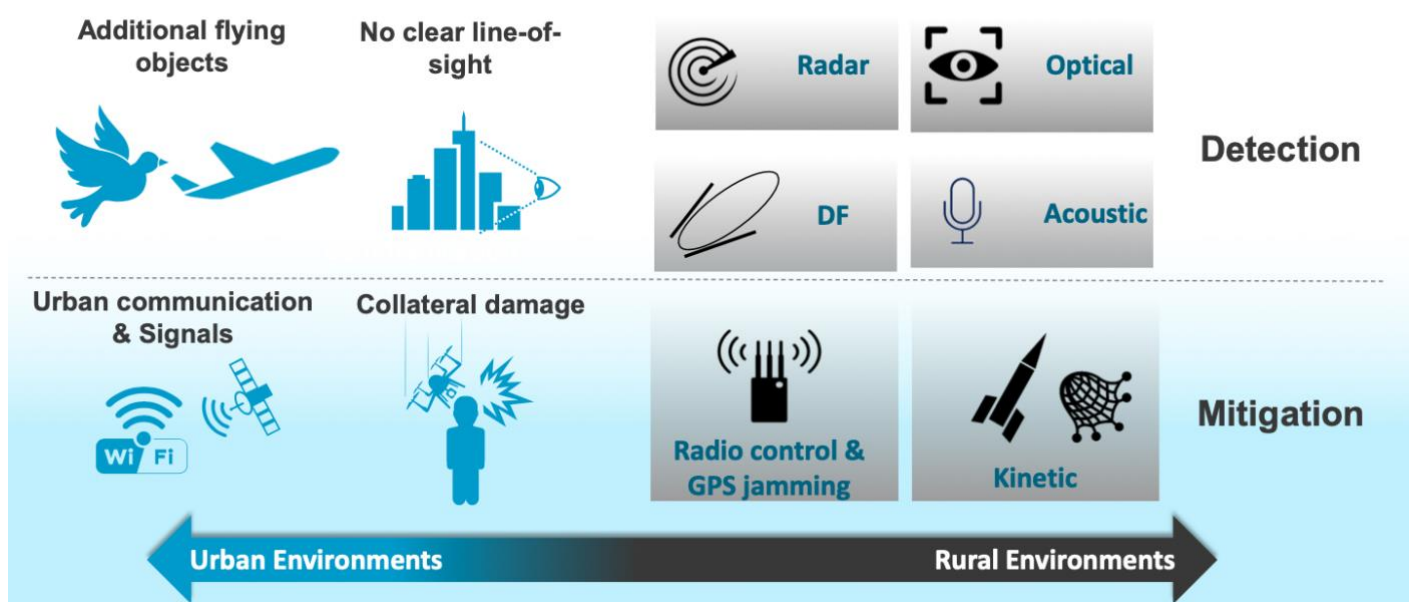

Highest standard in drone defense

We work with the **leading providers of C-UAS systems** and can develop a demand-oriented solution for the highest security requirements with our trained specialist staff.

We train "C-UAS operators" who are ready to intervene in an emergency. These specialized personnel can also be part of your rental model if you do not have them. In addition, we also offer training for your personnel in various areas including certification, for example as an "Industrial Drone Operator" or "Underwater Drone Operator". Here we rely on close cooperation with the **Akademie für Sicherheit und Wirtschaft GmbH (ASW)**, which specializes in the professional training and further education of specialist personnel with an orientation towards the focus on security.

COUNTER-DRONE TECHNOLOGIES

In line with our guiding principle "**All at one place**", we offer a holistic product range. We can respond to individual needs and design offers with variable investment volumes. In addition to the purchase of products and a fixed installation, we can also provide you with an offer for rental or for mobile operations.

"We train your staff or provide our experts".
